

Homework Project

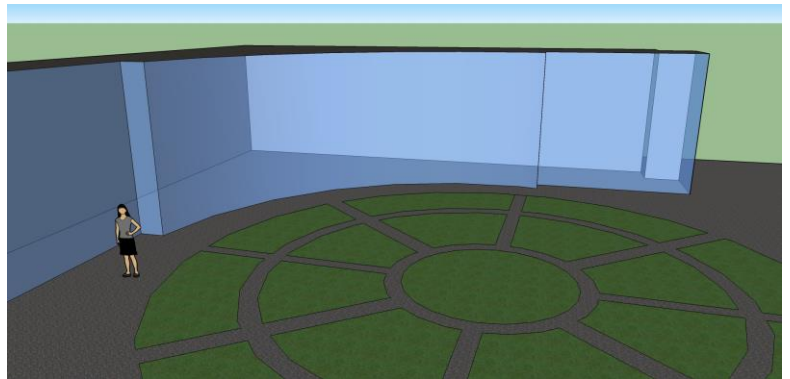

This homework must be submitted to your Computing teacher by _____.

3D School Model

For this homework task you will need to use the skills learnt in SketchUp. You can download the software for free at home from here:

<http://www.sketchup.com>

The free version we have been using in school is called 'SketchUp Make'. (Alternatively you can use the computers in school to complete your homework if you do not have computer access at home.)

For your homework this term you need to create a 3D model of the school using SketchUp. Try to make the model as accurate as possible and don't forget to use different textures and colours to make the buildings and grounds look more realistic.

Write up your experiences of using SketchUp for this task and clearly describe what you have done and how you have done it. Make sure you also explain the different tools you have used.

Finish your write-up with:

- ✓ What went well
- ✓ Even better if . . .

Stuck? Don't forget there are lots of tutorials online. Try searching on YouTube and looking at an aerial view of the school on Google Maps. You may also find it useful to take photos of the different areas of the school on your phone.
